jasontweaver10@gmail.com

SUMMARY

Technical advisor and full-stack developer with twenty years of direct customer-facing experience. Translates complex systems into clear business terms for non-technical stakeholders, integrates third-party APIs, and owns client delivery from first scoping call through launch and support. Google-certified in project management.

EXPERIENCE

Full Stack Web Developer | LeadFlask

2021 – Present | Columbus, Ohio

- Owns the client relationship end to end: runs the monthly planning meeting, reviews the prior month's delivery, and agrees the coming month's scope
- Translates client feature requests into technical work, maintains the backlog, and sets monthly expectations for the client and the team
- Trains client teams on the CMS and CRM they use and handles their support questions day to day
- Built the monthly reporting pipeline: pulls data from several sources into a CMS and a dashboard clients can check any time, then walks them through the results
- Sole developer at a small agency: owns architecture, build, and deployment end to end, directs the copywriter and AI engineer, and uses Claude Code daily to accelerate delivery
- Builds and maintains 12+ client sites in production, including Itcnews.com and the Midwest Biodiversity Institute, plus the CMS systems behind most of them
- Built the lead-routing CRM the agency runs on: ingests leads from multiple sources, assigns each to the right sales agent, and syncs to Salesforce, replacing a manual process
- Designed and implemented CI/CD pipelines with GitHub Actions, deploying applications to AWS, Laravel Cloud, Forge, and Heroku while reducing downtime and standardizing releases
- Set the standards client sites are built to and turned them into a reusable project template

Key Technologies: PHP, Laravel, Livewire, AlpineJS, JavaScript, MySQL, REST APIs, Git, AWS, Forge, Postman, Salesforce, Claude

Automotive Technician / Service Advisor | J&A Automotive

2006 – 2021 | Pickerington, Ohio

- Served as the primary point of contact between customers and technical staff, translating diagnostic findings into plain language and clear recommendations
- Diagnosed faults across a wide range of vehicle systems, working from customer-reported symptoms to root cause, then explained those findings directly to the customer

EDUCATION

Project Management: Specialization | Google | 2024

OpenAPI Fundamentals | The Linux Foundation | 2026

Full Stack Web Development | Altcademy | 2021
